

Cyber Incident Report- <Escuela Colombiana de Ingeniería>

Name of the Incident Responder: Esteban Aguilera Contreras - Carlos David Barrero

Date: 02/09/2025

Incident Priority (Incident Classification)

Check any one of the classifications- High, Medium or Low.

(2 Points)

☒ High	☐ Medium	☐ Low
Additional information: (Mention the reason for the classification) Misuse of AI by Russian, Chinese, and Iranian-backed hackers, creating a global cybersecurity risk		

Incident Type

Check all that apply.

(4 Points)

☐ Compromised System ☐ Compromised User Credentials (e.g., lost password) ☐ Network Attack (e.g. DDoS) ☐ Malware (e.g. Trojan, worm, ransomware) ☒ Reconnaissance (e.g. scanning, sniffing)	☐ Lost Equipment/Theft ☐ Physical Break-in ☒ Social Engineering (e.g. Phishing) ☐ Law enforcement request ☐ Policy Violation ☒ Unknown/Other
Additional information: (Mention the nature of the attack, enumerating the exploitation method in brief) Abuse of AI tools	

Incident Timeline

Please provide as much detail as possible.

(6 Points)

1. Date and time when the incident was discovered	Not mentioned
2. Date and time when the incident was reported	14/02/2024
3. Date and time when the incident occurred	Not mentioned

Incident Scope

Please provide as much detail as possible.

(8 Points)

1. Estimated quantity of systems affected	No compromised systems reported
2. Estimated number of locations affected	Not applicable
3. Third parties involved (vendors, contractors, partners)	Microsoft, OpenAI
4. Attack source (e.g. IP addresses, port)	State groups linked to Russia, China, Iran, and North Korea
•	

Systems affected by the incident

Please provide as much detail as possible.

(6 Points)

1. Type of system affected (e.g. PC, Laptop, server, mobile endpoints)	Plataformas de IA de Microsoft / OpenAI
--	---

2. Operating System of the affected System (e.g. Android, Windows, MacOS)	Not applicable
3. Vulnerability exploited	There was no technical exploitation of vulnerabilities

Incident Handling Log

Please provide as much detail as possible.

(4 Points)

1. Status of Incident Recovery	Revoked access to identified hacker groups
2. Action taken/planned for remediation	Microsoft and OpenAI implemented a total lockdown that prevents these state actors from continuing to use their AI products
Additional remediation details for the future: • Strengthen access controls to AI services, more strictly monitor misuse, and improve detection of suspicious activity in models
